Teacher Instructions

**LESSON 1**

**Reaching Your Goals: Choices and Benefits**

**Goal:** Explore the choices involved in saying “YES” to a healthy lifestyle and “NO” to underage drinking

**Time required:** 40 minutes, plus homework

**Materials required:** Student Magazine, Worksheet A, Internet access or printouts of the Student Assessment, pen or pencil, paper, family activity sheets

**Getting Started:**

1. **Assess student knowledge!** Distribute copies of the Student Assessment or send students to scholastic.com/studentassessment. Ask students to check the “pre-assessment” box and take the pre-assessment to show what they know.

2. Discuss actions that support a healthy lifestyle, including physical activity, eating healthy food, wearing helmets when biking, and saying “NO” to underage drinking.

**Using the Student Magazine/Worksheet:**

3. Distribute copies of the Student Magazine. Read about how Ashley Wagner’s choices helped her become a champion figure skater.

4. Ask students to discuss the things that can make it difficult to make healthy choices (e.g., peer pressure, believing that nothing bad will happen to you). Brainstorm ideas for adopting attitudes or life plans that support students in making healthy choices.

5. Distribute Worksheet A. Place students in groups to identify the choices required to meet life goals. Ask the groups to present their ideas to the class.

**Wrap-up:**

6. Write this statement on the board: *Your brain doesn’t stop developing until your mid 20s*. Explain that—because their brains and bodies are still growing—the healthy choices students make today influence their brain function and mobility into adulthood.

7. For homework, ask students to use the back cover of the Student Magazine to write three reasons why underage drinking does not support a healthy lifestyle. Distribute the family worksheets and instruct students to discuss underage drinking with their family members and complete Family Activity Sheet B at home.

**LESSON 2**

**Know Your Body: What Helps It, What Harms It**

**Goal:** Understand the ways that alcohol affects various internal organs

**Time required:** 40 minutes, plus homework

**Materials required:** Student Magazine, Worksheet B, highlighters, poster board, markers or colored pencils

**Getting Started:**

1. Write “Short-Term Effects” and “Long-Term Effects” on the board. Discuss the short-term effects drinking alcohol has on the brain, e.g., slowed thinking, impaired judgment, and diminished coordination. Describe how—due to his or her slowed reaction time—an intoxicated person may slur or stumble, as well as have dangerously delayed reactions while driving.

2. Explain that, because drinking alcohol impairs people’s ability to reason, they may engage in dangerous behavior—such as drunk driving—without being fully aware of how significantly their brain functioning has been impaired. As a consequence, we have laws about driving under the influence of alcohol.

3. Explain that the amount of alcohol in the body is measured by the Blood Alcohol Concentration (BAC) and the legal limit for driving after drinking alcohol is a BAC of 0.08. But if you are underage, any amount of alcohol can result in a DUI (driving under the influence) arrest.

4. Distribute Worksheet B. Discuss how alcohol affects various internal organs.

5. Draw a chart titled “Impacts of Underage Drinking” on the board with three columns: Physical, Social/Emotional, Academic/Athletic Performance. Separate students into groups and have them create their own impact chart identifying and categorizing eight to 10 consequences of alcohol use into one of the three categories.

**Wrap-up:**

6. Write this statement on the board: *Alcohol is absorbed through the stomach and travels through the body in the blood. Alcohol impacts every organ in the body, and only takes 30 seconds to reach the brain.*

7. For homework, instruct students to use “A Work in Progress,” Worksheet B, and independent research to create posters or storyboards illustrating how one internal organ operates in the body, how to keep that organ healthy, and how alcohol can damage that organ.

**LESSON 3**

**Alcohol and the Developing Brain**

**Goal:** Understand the harmful effects of alcohol on the teenage brain

**Time required:** 40 minutes, plus homework

**Materials required:** Student Magazine, Internet access or printouts of the Student Assessment, paper, pen or pencil, drawing paper, colored pencils

**Getting Started:**

1. Write “The Brain” on the board. Provide students with a copy of the quiz to bring home. Encourage them to challenge their classmates to do it as well.

2. Ask students to carefully review “Brain Drain” in the magazine to identify which parts of the brain are most harmed by underage drinking. Write this statement on the board: *Your brain contains multiple systems that control all of your body functions. Alcohol affects your entire brain and can permanently damage how your brain operates.*

3. Separate students into groups and instruct them to create a graphic that illustrates the short-term and long-term effects of alcohol consumption. Challenge them to consider how underage alcohol use can contribute to risky decision making and social problems.

4. Ask students to carefully review “Brain Drain” in the magazine to identify which parts of the brain are most harmed by underage drinking. Write this statement on the board: *Your brain contains multiple systems that control all of your body functions. Alcohol affects your entire brain and can permanently damage how your brain operates.*

5. Separate students into groups and instruct them to create a graphic that illustrates the short-term and long-term effects of alcohol consumption. Challenge them to consider how underage alcohol use can contribute to risky decision making and social problems.

6. Give students a copy of the quiz to bring home. Encourage them to challenge their classmates to do it as well.

7. Ask students to carefully review “Brain Drain” in the magazine to identify which parts of the brain are most harmed by underage drinking. Write this statement on the board: *Your brain contains multiple systems that control all of your body functions. Alcohol affects your entire brain and can permanently damage how your brain operates.*

8. Give students a copy of the quiz to bring home. Encourage them to challenge their classmates to do it as well.

9. Ask students to carefully review “Brain Drain” in the magazine to identify which parts of the brain are most harmed by underage drinking. Write this statement on the board: *Your brain contains multiple systems that control all of your body functions. Alcohol affects your entire brain and can permanently damage how your brain operates.*

**Wrap-up:**

10. Assess student knowledge! Distribute copies of the Student Assessment or send students to scholastic.com/studentassessment. Ask students to check the “post-assessment” box and take the post-assessment to show what they learned. Discuss the correct answers to the assessment with students: 1. (A) Every organ; 2. (B) 30 seconds; 3. (D) Your entire brain; 4. (A) True, (A) True; 5. (D) All of the above; 6. Answers will vary; 7. All boxes should be checked.

11. Give students a copy of the quiz to bring home. Encourage them to challenge their classmates to do it as well.

**Teacher Instructions**

*NO PURCHASE NECESSARY. Both the “Assessment Sweepstakes” and the “Teacher Feedback Sweepstakes” are open to legal residents of the 50 United States (including the District of Columbia) who currently teach grades 5–7 and are 18 years of age or older. The deadline to enter both sweepstakes is May 9, 2014; entries must be postmarked by April 30, 2014. Void where prohibited. Assessment Sweepstakes: To enter, visit the contest page at scholastic.com/assessmentrules. Teacher Feedback Sweepstakes: To enter, visit the contest page at scholastic.com/feedbackrules.***
Alcohol and Your Body

Brain Drain
Did you know that scientists have found changes in brain cells as little as six minutes after the consumption of alcohol? These changes can create permanent damage, especially in the teen brain. Because your brain isn’t fully formed, staying away from alcohol can help protect your developing brain.

BAD DECISIONS
Alcohol can permanently damage the frontal lobes and make people more prone to developing depression. The frontal lobes control emotions and impulses, and are responsible for planning, forming ideas, and making decisions.

BASIC FUNCTIONS
Alcohol can impair the hypothalamus. This part of the brain controls basic—and important—body functions like blood pressure, body temperature, and heart rate.

LEARNING AND MEMORY
Drinking alcohol can permanently damage the hippocampus, which is key for learning and remembering. Of all the damage that alcohol can do to a developing brain, underage drinking harms memory the most.

SLOWED SENSES
Alcohol affects the cerebellum, which the body relies on for awareness and coordination. After drinking too much, a person might misjudge dangerous situations or be too uncoordinated to prevent accidents.

SLUGGISH SYSTEM
The central nervous system—made up of the brain and spinal cord—sends messages throughout the body. Alcohol can slow this system, delaying a person’s responses to external stimuli—even in emergency situations.

A Work in Progress
Adolescence is a time of rapid and dramatic development—teen girls can grow as much as 9.5 inches, and boys up to 20 inches. It’s important for teens to make healthy choices that support their developing bodies. Whether you want to excel at sports, attend college, get a great job, or travel the world, drinking alcohol while underage can rob you of the things you need to reach your goals.

<tr>
<th>What You Need</th>
<th>Why You Need It</th>
<th>How Alcohol Interferes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Water</td>
<td>Water helps with digestion, circulation, and transportation of nutrients. It also energizes your muscles.</td>
<td>Alcohol increases urine output and causes dehydration, making it more difficult to build muscle.</td>
</tr>
<tr>
<td>Nutrients</td>
<td>Vitamins and minerals boost the immune system, help organs work properly, and are necessary for growth and development.</td>
<td>Large amounts of alcohol can slow or stop the digestive process, robbing you of the vitamins and minerals needed for growth.</td>
</tr>
<tr>
<td>Physical activity</td>
<td>Regular exercise strengthens bones, protects the heart, boosts mood, and can help prevent diseases such as diabetes and cancer.</td>
<td>Drinking can cause heart disease, mask depression, and contribute to weight gain, all of which impair physical activity.</td>
</tr>
<tr>
<td>Sleep</td>
<td>Sleep is key for overall health. It supports your attention, mood, physical health, and performance in school and sports.</td>
<td>Alcohol can interfere with sleep patterns, preventing you from getting the sleep you need.</td>

What Do You Know About Your Body and Alcohol?

**STUDENT INFORMATION**

State: ________________________  Grade: _______________________  Gender: ____________

**ASSESSMENT QUESTIONS**

Select the best possible answer(s).

1. Which organ in the body can be affected by drinking alcohol?
   - A. every organ
   - B. heart
   - C. kidneys
   - D. liver

2. How long does it take for alcohol to move through your bloodstream and reach your brain?
   - A. 10 seconds
   - B. 30 seconds
   - C. 5 minutes
   - D. 20 minutes

3. Which part(s) of your brain would be affected if you drank alcohol?
   - A. cerebellum
   - B. hypothalamus
   - C. medulla
   - D. your entire brain

4. True or False

   A. Alcohol can affect your judgment and can result in making bad choices.
   - True  False

   B. Drinking alcohol underage is not part of a healthy lifestyle.
   - True  False

   C. Exercise increases the growth of brain cells.
   - True  False

5. Which of the following is controlled by your brain?
   - A. physical movement
   - B. balance
   - C. reaction time
   - D. all of the above

6. Which of the following dangers do you associate with underage drinking? *Check all that apply.*
   - Failing in school
   - Getting in trouble or suspended from school
   - Getting suspended or kicked off a team/club
   - Being moody and fighting with friends
   - Hangovers
   - Heart and liver disease
   - Getting in trouble with the police/law
   - Getting arrested
   - Drunk driving
   - Risk of developing depression
   - Hurting the way your brain develops
   - Interrupting your growth
   - Embarrassing yourself at parties

7. Why does a healthy lifestyle include saying “NO” to underage drinking? *Check all that apply.*
   - Because the teen brain is still developing
   - Because the teen body is still developing
   - Because if you drink you can make bad choices, such as drunk driving, getting into fights, or blowing off school
   - Because alcohol can harm your organs
   - Because underage drinking is against the law

---

A. Have you ever talked about underage drinking with your teacher as part of a classroom discussion in school?
   - Yes  No

B. In the last year, how often have you talked with your parents, grandparents, or another adult caregiver about the dangers of underage drinking?
   - Never  1 time  2 or 3 times  4 or more times
